QTS-4302

Protect your flower field!

You play as Robin, a bee from the family hive. Robin has been assigned a nearby flower field to pollinate.

When Robin arrives at his field, he finds rival pollinators blocking his path.

Use your stinger to defeat the rivals and bring the pollen back to the hive.

Watch out for the rival's pollen balls, get hit by them too many times and it is game over.

Starting the game

Pollinator uses the left joystick on your Atari 2600 system.

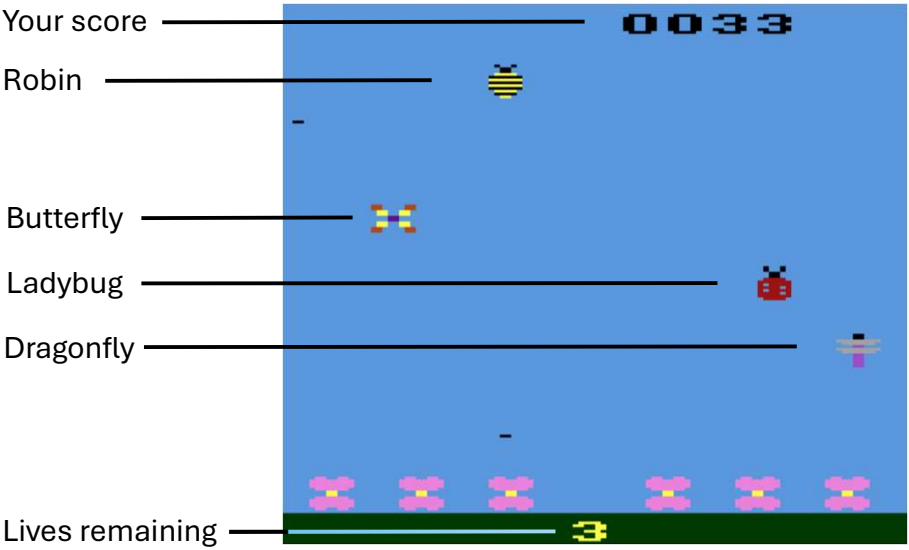

1. With the power off, insert the cartridge.
2. Turn the power on.
3. Set your desired difficulty level.

    A – Enemies speed up at a lower score

    B – Enemies speed up at a higher score
4. Start the game using the Reset switch or the joystick button.

The game screen

Scoring points

Points are scored when Robin's stinger hits a rival pollinator.

Butterflies are worth one (1) point.

Ladybugs are worth three (3) points.

Dragonflies are worth five (5) points.

Adjusting the difficulty

When you set the left difficulty switch to B (novice), Robin's rivals speed up at 1,000, 2,000 and 3,000 points. Pollen balls speed up at 4,000 points.

With the left difficulty switch set to A (expert), the rival pollinators speed up at 1,500, 3,000 and 4,500 points, with the pollen balls speeding up at 6,000 points.

Once the pollen balls become faster, the game is at it's maximum speed.

NOTE: The difficulty can only be adjusted before the game starts. Moving the switch mid-game does not change the current difficulty level.

Robin gains a new life (5 maximum) every 100 points, regardless of difficulty.

The end game

Pollinator ends when Robin runs out of lives or the he saves his flower field (the maximum score of 9,999 points is reached).

When Robin wins, he sings a short victory song and starts pollinating his field.

A job well done!

Credits

Pollinator was originally conceived as a “bee game” in December 2025. It was completed in September 2026.

Design, programming, graphics, sound and music by David C. Kline

Manual and label also by David C. Kline

Special thanks to Michele Kline. This game would not exist without your encouragement, support and feedback. You mean the world to me.

To the 11-year-old me, who dreamed of writing games for the Atari 2600…. We did it!
